

## CLIP-ON RETROFIT ON-DEMAND FISHING SYSTEM

The Guardian/Sub Sea Sonics Clip-On Retrofit is a simple, reliable and inexpensive on-demand fishing system. The system is quick to rig and can be used on singles or trawls in depths to over 300 ft. These units are designed to easily retrofit by clinch-clipping to the end of existing gear and use existing line and buoys if desired. The system provides all required underwater system capabilities including elimination of the vertical buoy line during fishing, acoustic on-demand triggering, can be set and redeployed at sea, is size compatible with fishing operations, is functional in a broad range of temperature conditions, constructed for the physical use on fishing vessels and underwater conditions, and has been previously tested.

### SPECIFICATIONS

- Triggering: Compatible with Sub Sea Sonics AR4RT, AR4RT+ and DAR4RT acoustic release systems
- Buoy Line Length: Up to approximately 300 ft of 3/8 in diameter line
- Buoys: Compatible with hard trawl floats, poly buoys and foam buoys including main and trailers
- Environmental: Compatible with seawater conditions, pressures and temperatures
- Dimensions: Approximately 15" long x 20" w x 14" high
- Operating depth: Limited by buoy line length to approximately 200 ft
- Integration: Clips on to the end of an existing lobster pot
